

New York - JFK. Note buildings around the terminal loop and northeast of NW-SE runway. Note also SW-NE runway (extending from jetty) shown as complete on 1967 USGS, not yet built on Soviet compiled 1971. Depth 23ft does not convert to 6m, but benchmark 15 is 4.6 and 20 is 6.1 (near top right). Roads and interchange top left are different and urban blocks north and east of airport are differentiated between high rise and low rise.
